(+52) 442 169 4805

Mexico City, MX

EDUCATION

Tecnológico de Monterrey (ITESM)

Querétaro City, México • 12/2018

B.S. Digital Systems & Robotics Engineering

TECHNICAL SKILLS

CLOUD
AWS (EC2, S3, RDS), Cloudflare (WAF/DNS, CDN)

NETWORKING & SECURITY
Nginx (Reverse Proxy, SSL), Wireshark (PCAP), nftables, Netplan, SFTP/FTP

SCRIPTING & AUTOMATION
Python, Bash, PowerShell, systemd daemons, Git

SYSTEMS & VIRTUALIZATION
Debian 13, Ubuntu, Windows Server, Proxmox VE (KVM), Docker

BACKEND & DATABASES
Node.js, Express, SQLite, MySQL/MariaDB, REST APIs, WebSockets, PM2

OBSERVABILITY & AUDITING
RRDtool, FOSSology, Black Duck Hub, SPDX Standards

CERTIFICATIONS

- Scrum Master (Agile)
- Open-Source Compliance & SPDX
- Proxmox VE / KVM Virtualization

LANGUAGES

English: Advanced / Professional

Spanish: Native

PROFESSIONAL SUMMARY

Systems & Infrastructure Engineer (ITESM Robotics graduate) with 5+ years of experience in Linux server administration, virtualization (Proxmox VE), process automation (Bash/Python), and open-source software compliance. Proven track record provisioning high-availability hosting environments, configuring reverse proxies, and resolving complex infrastructure escalations under strict 24/7 uptime SLAs.

WORK EXPERIENCE

ZAP-Hosting — Technical Support & Infrastructure Engineer

11/2025 – Present

Remote, Mexico City, Mexico

- Provisioned and monitored virtual servers (VPS) and dedicated bare-metal blades on **Proxmox VE** hypervisors, maintaining **99.9%+ uptime SLAs**.
- Deployed and optimized dedicated game servers using **SteamCMD**, tuning CPU core allocation and memory limits to prevent performance bottlenecks.
- Configured **Nginx reverse proxies**, SSL certificates, and secure SFTP file transfer permissions for client hosting environments.
- Automated routine server maintenance tasks across Linux and Windows instances using **Bash and PowerShell** scripts, cutting manual intervention.
- Captured and analyzed network packets using **Wireshark (PCAP)** to identify and resolve false-positive connection drops in PletX DDoS mitigation filters.
- Resolved Tier-1/Tier-2 network, hardware, and OS escalations under strict response-time SLAs.

Continental Automotive — Open-Source Compliance Engineer

11/2019 – 01/2025

Querétaro City, Querétaro, Mexico

- Audited enterprise software packages using **FOSSology and Black Duck Hub** to enforce open-source license compliance (GPL/Apache/MIT) and mitigate legal risks.
- Developed Python scripts integrating compliance tools with internal platforms via **REST APIs**, accelerating audit turnaround times.
- Automated report generation and data validation pipelines using **Bash and Python**, reducing debugging time.
- Administered **Ubuntu Linux servers**, standardizing automated deployment and health checks through CI/CD pipelines.
- Engineered an internal web tool on **AWS (S3, EC2, RDS)** to centralize compliance data workflows across international engineering teams.
- Deployed a cloud-based server in 2024 to consolidate software management tools, eliminating redundant server costs.
- Facilitated sprint planning and daily standups as **Scrum Master** to improve team delivery predictability.

Congeladora Niño — Maintenance Engineer

03/2019 – 10/2019

Irapuato, Guanajuato, Mexico

- Troubleshot and repaired complex electrical and mechanical equipment (forklifts and electric pallet trucks), reducing factory downtime.
- Executed preventative maintenance routines following OEM technical manuals to ensure operational reliability.

LUIS RODRIGO GARCÍA H.

PERSONAL PROJECTS

Production self-hosted services, autonomous daemons, and local AI workflows.

ARCHITECTURE FOCUS

• **On-Premise Privacy:** Local LLM runtime with strict heuristic prompt conditioning to eliminate cloud data leakage.

• **High Availability:** Systemd daemons, PM2 supervision, and automated SSL certificate rotation.

• **Low Overhead:** Lightweight background services engineered to run at minimal CPU and RAM footprint.

PERSONAL PROJECTS

Local AI Engineering Copilot Rig

`Qwen3.8-27B-GGUF · AMD ROCm (24GB VRAM) · Ollama`

- Built an on-premise AI assistant on an AMD RX 7900 XTX (24GB VRAM) to scaffold personal full-stack apps and diagnose server error logs 100% locally.
- Engineered custom prompt skills with strict log-pattern heuristics (Nginx, systemd, Node/Python stack traces) to eliminate model hallucinations and reduce false positives.
- Cut troubleshooting and root-cause search time by over 50% across self-hosted services without sending sensitive configuration data to external clouds.

Production VPS Fleet & Live Telemetry Engine (therodrigo.com)

`Debian 13 · Nginx · RRDtool · Bash · Cloudflare`

- Architected a personal Debian 13 VPS host behind Nginx reverse proxy, automated Let's Encrypt SSL, and Cloudflare WAF.
- Wrote a parallel ICMP probing daemon in Bash paired with multi-tier circular RRD databases (24h/7d/30d) to track sub-millisecond latency and jitter.
- Integrated real-time system metrics, PM2 process monitoring, and CISA KEV vulnerability feeds.

PresWin — Construction Cost & Unit Price Estimator

`Node.js · Express · PM2 · SQLite · WebSockets`

- Developed a web-based cost estimation platform with automated unit-price breakdowns and material explosion calculations, saving hours of manual spreadsheet work.
- Configured Nginx WebSocket pass-through and persistent SQLite storage to handle large architectural data uploads.

Automated Appointment Checker Script

`Python 3 · systemd · REST APIs · Webhooks`

- Programmed a background polling daemon with dynamic jitter, anti-ban header rotation, and instant push notification webhooks (Telegram/Pushover) for slot detection.
- Operates 24/7 as an isolated low-footprint service consuming <0.1% CPU and 45MB RAM on Debian 13.
